Profile

I'm a WordPress developer at Theme Wire, where I build sites, custom themes and templates and write plugins when a site needs one. Before that I spent years in IT support, the person students, staff and customers came to when something stopped working, so talking a client through a problem is as normal to me as fixing it. On my own I've built eight live client sites and run each one from the first call to launch, and I still look after several of them. I'd like a job where the development and the client work sit together. I already handle hosting, migrations and the SEO setup on my own projects. Email campaigns are the part I've done least, and the next thing I want to get good at.

Experience

WordPress developer

01/2026 to now

Theme Wire, Ghana

- Build new WordPress sites, custom themes and templates, and write plugins when a client needs something no existing plugin does.
- Look after live client sites: updates, plugin changes and fixes when something stops working.

Freelance WordPress developer

Current

Accra and remote

- Built eight live sites in WordPress, Elementor and WooCommerce for NGOs, consultancies and service businesses in Ghana and the UK, including an online shop with checkout and a meal ordering site that takes Paystack payments.
- Run every project on my own, from the first call with the client and the Figma designs through the build, the launch, and showing their team how to update the site.
- Set up hosting, domains and SSL for client sites, move sites to new hosts when they outgrow the old one, and look after backups, DNS and business email accounts.
- Before launch I set up Yoast or Rank Math, connect the site to Google Search Console and Analytics, and compress images and add caching so pages load quickly. Where a client sends newsletters, I connect the sign up forms to their email list.
- Still support several clients after launch, such as the Mawuena Datsa Foundation and Hadassah Foundation, whose sites I maintain.

Technician

02/2022 to now

KA Technologies, Accra

- Find and fix hardware and software faults, and support operating systems, applications and networks.
- Run diagnostics and performance tuning; machines usually come back about 20% faster, with fewer failures.

IT support and technical services (national service)

09/2020 to 11/2021

University of Ghana, Legon

- Ran the ICT lab and was the person over 500 students and staff came to when their tech broke, from network connections and system crashes to printers.
- Set up hardware, peripherals and software, and explained fixes in plain language so people could keep working.

Operations manager

07/2021 to 08/2021

Jumeni Technologies, East Legon

- Ran daily operations and onboarded new customers, which kept more of them coming back.
- Designed the company's marketing material and graphics.

Intern, graphic design and web development

06/2019 to 07/2019

MEST Africa (Jumeni Technologies), East Legon

- Learned web development with HTML, CSS, JavaScript and WordPress on real projects, and helped make existing sites faster.

IT support specialist

Christ Cares

- Diagnosed software and hardware problems and did routine maintenance to prevent downtime.
